

What Love Looks Like

Bulletin Board Project — Planning Draft

Based on 1 Corinthians 13:4–7 (NASB)

For: Charles • From: Paul • Initial concepts, open to revision

Project Overview

Audience: Junior High and High School classroom.

Passage: 1 Corinthians 13:4–7. Each attribute rendered as a separate visual panel.

Concept: A unified wall installation showing real-world teen scenarios that illustrate each attribute of love. Action shots, not head shots. Photorealistic style. Visually coherent palette and lighting across all panels.

Format: Title banner plus thirteen attribute panels. Final dimensions to be confirmed once we measure the wall.

Production: Generated images, then text overlaid in PowerPoint or similar to keep typography consistent. Printed in-house on the large-format printer. Laminated and stapled to the wall by Charles.

Timeline: Approximately three months to install date.

Design Principles

One visual language across all panels

The installation only reads as one piece if every panel shares a visual language. We commit to these decisions up front and hold them across all thirteen images.

Style

Photorealistic. Love looks like real people doing real things. Illustration distances the viewer from the message; photographs put it in front of them.

Palette

Warm tones, classroom-appropriate, inviting rather than clinical. Working palette to be confirmed:

- Soft golds and warm earth tones as the base.
- Muted blue-green for contrast in clothing or environment.

- Deep accent color (navy or burgundy) for the text overlay.

Lighting

Golden-hour or soft warm interior light across all panels. Avoid harsh midday sun and avoid fluorescent overhead.

Setting

Real-world teen environments — school hallways, classrooms, cafeterias, sports sidelines, front porches, kitchens, parks. No fantasy backgrounds, no obvious stock-photo aesthetics.

People shown

Teens dressed appropriately for a church classroom context. Modest clothing, natural posture, action-oriented. We will use a mix of teens across the thirteen panels rather than the same teen in all of them, both because character consistency in image generation is unreliable and because a varied wall represents the body of Christ better than a single face does. Final demographic mix to be confirmed with Charles based on the classroom.

Typography

One font, one size, one position on every panel. The attribute text ("Love is patient," etc.) overlaid in the same place on every image. Scripture reference (1 Corinthians 13:4–7) in smaller type underneath the attribute. Text overlaid in PowerPoint or similar after image generation, never baked into the generated image itself.

Format Options for the Wall

With the large-format printer available, three formats are realistic. Charles's preference will determine which we develop.

Option A: Title banner plus thirteen panels (recommended)

A 36-inch or 48-inch wide banner across the top reading "What Love Looks Like" with the Scripture reference underneath. Then thirteen attribute panels at tabloid size (11 x 17) or larger, arranged below in a grid. Combines visual unity with modular flexibility.

Pros: Looks like a designed installation. Easy to install. Charles can rearrange panels if needed.

Cons: More printing than a single composite, and small alignment matters when stapling.

Option B: Single composite poster

One large poster (36 x 48 or larger) with all thirteen attributes laid out as a unified visual composition. Laminated and hung as a single piece.

Pros: Maximum visual unity. Single installation step. Looks like a real piece of design.

Cons: Less flexible. One printing error means reprinting the whole thing. Harder to update later.

Option C: Thirteen letter-size panels with die-cut title

The original concept Charles described — thirteen 8.5 x 11 panels with the title in die-cut letters from the workroom.

Pros: Simplest production. Uses materials already on hand.

Cons: Underuses the large-format printer. Less visual coherence at the title level. Smaller images read less well from across the room.

Initial Scene Concepts for the Thirteen Panels

First-pass concepts. Treat these as starting points. Each will be refined when we draft the actual generation prompts. Difficulty notes flag the panels that will need extra thought.

1. Love is patient

Primary concept: A teen kneeling down to help a younger sibling tie their shoes, calm expression, no hurry in the body language.

Alternate: A teen at a kitchen table walking a younger child through a math problem; or a teen waiting at a bus stop helping an elderly rider get on slowly.

Difficulty: Easy. Patience reads well in body posture and facial expression.

2. Love is kind

Primary concept: A teen handing a water bottle to a tired classmate at a sports practice.

Alternate: Holding a door open for someone whose hands are full; or sitting down next to someone eating alone at a cafeteria table.

Difficulty: Easy. Concrete, visible kindness.

3. Love is not jealous

Primary concept: A teen genuinely cheering for a teammate who has just received an award or trophy that the teen themselves did not get — face showing real joy, not performance.

Alternate: Clapping at a friend's recital or performance from the audience.

Difficulty: Moderate. The emotion has to read as authentic joy, not staged. We will need to be careful with the prompt.

4. Love does not brag and is not arrogant

Primary concept: A teen on a sports field, after a winning play, pointing at a teammate and giving them the credit instead of celebrating themselves.

Alternate: A teen at a podium or holding a trophy quietly thanking someone else; deflecting attention rather than basking in it.

Difficulty: Moderate. Body language has to do the work — hand pointing outward, eyes on the other person.

5. Love does not act unbecomingly

Primary concept: A teen offering a seat to an elderly person on a crowded bench or bus.

Alternate: A teen standing respectfully during a flag salute, prayer, or moment of silence while others are distracted.

Difficulty: Moderate. The text covers behavior that is improper or rude, so we want a panel showing the becoming behavior — courtesy, respect, propriety. Worth asking Charles whether he leans more toward the modesty angle or the courtesy angle.

6. Love does not seek its own

Primary concept: A teen handing over the last slice of pizza or the front seat to a friend, gentle deference in the body language.

Alternate: A group of teens choosing a movie or activity, with one teen visibly stepping back from their preference so a friend's choice wins.

Difficulty: Easy. The visual cue is the handing-over gesture.

7. Love is not provoked

Primary concept: A teen being teased or jostled and visibly choosing not to escalate — calm face, open hands, walking away with composure.

Alternate: A teen in a heated discussion staying calm while another raises their voice.

Difficulty: Moderate. The teen has to look composed and intentional, not cowed or fearful. We want the panel to show strength under pressure, not weakness.

8. Love does not take into account a wrong suffered

Primary concept: Two teens working together on a project after an earlier disagreement, focused on the task rather than the past, body language collaborative rather than guarded.

Alternate: Two teens shaking hands or in a brief hug after an argument, no scorekeeping in the posture.

Difficulty: Moderate. The “no scorekeeping” feel is what to capture — the past is genuinely behind them.

9. Love does not rejoice in unrighteousness, but rejoices with the truth

Primary concept: A teen telling the truth in a hard moment — owning up to something to a teacher or parent, or correcting a story to defend an absent classmate.

Alternate: A teen visibly declining to join a group that is mocking or gossiping about someone who is not present — stepping back, turning away.

Difficulty: Hard. This attribute has two halves; we lean toward the truth-telling half because it is more visually positive and easier to photograph well.

10. Love bears all things

Primary concept: A teen sitting next to a grieving friend, hand on shoulder, present without trying to fix anything.

Alternate: A teen carrying a friend’s backpack or books on a hard day; the literal carrying-of-weight as the visual metaphor.

Difficulty: Moderate. “Bears” carries the sense of supporting under weight, so a supporting posture works well.

11. Love believes all things

Primary concept: A teen listening attentively to a friend’s explanation, taking them at their word — leaning in, eyes engaged, body open.

Alternate: A teen praying with a friend, hands folded, eyes closed.

Difficulty: Hard. This is genuinely interior. The listening shot keeps it grounded in human relationships, which is what the chapter is about.

12. Love hopes all things

Primary concept: A teen working on a long-term project — planting a tree, building something, tending a garden — that will not be finished today. Hope as patient investment in something not yet visible.

Alternate: A teen looking out a window or up at a sunrise with a thoughtful, hopeful expression.

Difficulty: Hard. Action-based hope (the long-term project) is stronger than mood-based hope (the wistful gaze) because it stays concrete.

13. Love endures all things

Primary concept: A teen at a hospital bedside, sitting with a sick family member or friend, having clearly been there a long time — endurance as sustained presence.

Alternate: A teen finishing a long run, exhausted but still moving; or a teen still studying late at a desk after others have given up.

Difficulty: Moderate. The image needs to communicate “this is not the first time and it will not be the last” — endurance is a posture sustained over time, which is hard to capture in a single frame, but the hospital-bedside image carries it well.

Open Questions for Charles

Things to confirm with him before we begin generating images:

- Wall dimensions, color, and lighting in the classroom (so we can size and color-tune the installation).
- Format preference: title banner plus panels (Option A), single composite poster (Option B), or letter-size panels with die-cut title (Option C).
- Demographic mix of the classroom — should the teens shown reflect a particular demographic, or should we use a mix?
- Translation preference — NASB language as written above, or does he want any line softened or rephrased for the wall?
- Any specific scenes he already has in mind that should override our concepts.
- Actual install deadline (three months exact, or earlier?).

Proposed Process

- Confirm format and answers to open questions with Charles.
- Lock the visual language: palette, lighting, style, typography.
- Draft a generation prompt for each panel, one at a time. Review each generation before moving on. No batching.
- Send the first three or four panels to Charles for early feedback before producing the rest, to make sure the visual direction is right.
- Produce the remaining panels.
- Overlay the attribute text and Scripture reference on every panel using a consistent template.
- Print, laminate, and install.

End of planning draft. Ready for review and revision.
